**Industrial Hygiene Assessment
Resulting in the Discovery of an
Illegal Drug Laboratory
At
7309 E. 82ND PLACE
COMMERCE CITY CO 80022**

Prepared for:
Confidential Client 1283

Prepared by:

FORENSIC APPLICATIONS CONSULTING TECHNOLOGIES, INC.
185 Bounty Hunter's Lane
Bailey, CO 80421

May 4, 2015

EXECUTIVE SUMMARY

- At the request of an interested party with standing and authority, state of the art sampling was performed by personnel with Forensic Applications Consulting Technologies, Inc. (FACTs) for the determination of the presence of methamphetamine at 7309 E 82nd Place, Commerce City CO 80022.
- On Wednesday, April 29, 2015, FACTs performed a standard “basic methamphetamine survey” for methamphetamine and collected samples pursuant to established Industrial Hygiene practices and procedures.
- According to the Senior Assistant Attorney General for the Natural Resources and Environment Section, a “basic methamphetamine survey” is not subject to any regulatory constraints and none are implied in this work.¹
- FACTs collected samples from five locations throughout the residence and composited the samples into a single 5-parted composite sample for quantitative analysis of methamphetamine.
- The sample results indicate the presence of profoundly elevated widespread concentrations of reportable methamphetamine in the residence.
- Based on the results of the samples, an “illegal drug laboratory,” as defined in Colorado Revised Statutes §25-18.5-101(8) exists at the subject property.
- This letter and documentation serves as “Discovery” of an illegal drug laboratory, as that term is found in Colorado Revised Statutes §25-18.5-103(1)(a) and Regulation 6 CCR 1014-3(3) at the subject property.
- This letter and documentation serve as “Notification” of an illegal drug laboratory at the subject property, as that term is found in Colorado Revised Statutes (CRS) §25-18.5-103 (1)(a).
- Pursuant to CRS §25-18.5-104(1), from this point forward, entry into the subject property is explicitly restricted by regulation.
- Pursuant to CRS §25-18.5-104, prohibition of entry extends to Real Estate agents, the property owner(s), the current occupants, maintenance personnel, potential buyers, home inspectors, and any and all other personnel, except law enforcement personnel and personnel meeting the requirements of Title 29 of the Code of Federal Regulations, Part 1910.120(e).

¹ The term “basic methamphetamine survey” was coined by Daniel S. Miller, Senior Assistant Attorney General, Natural Resources and Environment Section, State of Colorado Department of Law, February 2, 2015.

- Pursuant to CRS §25-18.5-103(1)(c) no person shall remove any personal belongings or personal property from the property except pursuant to Colorado Regulations 6 CCR 1014-3.
- Any seller who is aware of the presence of an illegal drug laboratory is required by CRS §38-35.7-103(3)(a) to disclose to any potential buyer, in writing, the presence of the same.
- According to State Regulation 6 CCR 1014-3, any cleaning and/or remediation and/or decontamination is strictly prohibited, except pursuant to a completed Preliminary Assessment.

INTRODUCTION

On Wednesday, May 29, 2015, FACTs, performed a standard “basic methamphetamine survey” for the presence of methamphetamine at the residence located at 7309 E 82nd Place, Commerce City, CO.

Pursuant to standard, accepted Industrial Hygiene practices and protocols, FACTs collected a single 5-parted composite wipe sample for the quantitative determination of the presence of methamphetamine (five sample locations).

Personnel

The field work was performed by Mr. Caoimhín P. Connell, Forensic Industrial Hygienist (as that term is defined in CRS §24-30-1402). A copy of Mr. Connell’s SOQ is appended to this discussion.

Structure

The 1953 subject property, consisted of a single family residence with indefinite square foot plan.

Objective Findings

Based on state of the art sampling and analysis techniques, FACTs conclusively determined the presence of widespread profoundly elevated methamphetamine contamination in the residence. Based on current statutes and regulations, the property meets the definition of an “illegal drug laboratory.”

PERTINENT REGULATORY STANDARDS

The State of Colorado currently has one methamphetamine regulation and three methamphetamine statutes that are germane to the subject property.

State Statutes

Environmental Statutes

Until recently, the State of Colorado had one of the country's most comprehensive and scientifically valid clandestine drug laboratory regulations. On December 15, 2014, those regulations were replaced with poorly written regulations. However flawed, Colorado's regulations become applicable when the owner of a property has received "notification" from a cognizant authority that a property is or *may* be noncompliant or methamphetamine *may* be present, or there is a potential for contamination. The discovery upon which the notification is based may be from a peace officer "...or when a *"drug laboratory" is otherwise discovered.*"²

Pursuant to State statute CRS §25-18.5-105(1), an illegal drug laboratory that has not met the cleanup standards set by the State Board of Health may be deemed a public health nuisance, and must be subject to one of the following:

State Regulations

Pursuant to Colorado regulations 6 CCR 1014-3,³ following discovery and notification,

The owner exclusively has four options:

- 1) Demolish the structure
- 2) Perform a "full clearance sampling" assessment (not recommended for this property)
- 3) Perform a Preliminary Assessment - mandatory
- 4) Sell the property under full disclosure

In this case, the sample results indicate widespread contamination, and there is no probability that "full clearance sampling" assessment will demonstrate compliance.

ASSESSMENT PROTOCOLS

Sampling Protocol

During our "basic methamphetamine survey," the hypothesis was made that the subject property was devoid of detectable concentrations of methamphetamine at a specified limit of reporting and data would be collected to support the hypothesis. As such, the data quality objectives were not designed to meet any regulatory requirements or quantify or characterize the *extent* or degree of contamination, but rather to support the statement:

Methamphetamine is not present in the property above specified levels.

Our DQOs were such that we selected a total sampling area that would result in a reportable quantity limit of 0.5 µg/100cm². That is, unless the concentration of the

² CRS §25-18.5-103

³ Titled: As amended

methamphetamine in the composite sample exceeded 0.49 µg/100cm², the laboratory would report the concentration as “below reportable limit.”

For this property, FACTs employed scientifically valid sampling instead of regulatory sampling, and employed a sampling decision process known as “authoritative judgmental biased sampling.”

Our testing produced results that failed to support the hypothesis, and we therefore accept the null hypothesis; *viz.* the subject property conclusively contains methamphetamine at concentrations greater than the specified reporting limit. The null hypothesis that we must accept is:

Methamphetamine is present in the property above specified levels.

Field Blanks

The history of the FACTs sampling media has demonstrated a media and solvent contamination level below the analytical detection limit for the method. For this project, FACTs data log indicates an alcohol Lot # A13Ø2 <MDL for n=55; and Gauze Lot # G14Ø1 <MDL for n=15. Therefore, for this property, we are confident the methamphetamine identified in the samples is due to contamination at the property and not as a result of contaminated sampling materials.

Field Spikes

As part of our general QA/QC protocol, FACTs regularly submits surreptitious spikes to the analyzing laboratory. "Spiked" samples consist of randomly selecting samples that are submitted to a third party independent laboratory for the inclusion of known amounts of *d*-methamphetamine⁴ into the selected sample media. The spiked samples are then surreptitiously submitted with the normal project samples. To ensure the integrity of the spikes, laboratory personnel are unaware of the presence or nature of the spikes. The spikes allow FACTs to determine the adequacy of the laboratory in recovering known amounts of methamphetamine from the samples. Sample results reported are then corrected to the spike recovery.

In this case, we used the pooled spike recovery from all previous projects which indicates a spike recovery of 98.6% recovery (n=35, σ =0.14 µg). All final results were spike-corrected. Therefore, if methamphetamine had been present at concentrations greater than the reportable limit, FACTs is confident that we would have been capable of identifying the contaminant.

Sample Results

The actual methamphetamine *concentrations* found in the samples taken at the subject property, are not required to be reported, are not germane to this discussion and cannot be used for any purpose other than discovery. The numerical values of the results do not

⁴ S(+)-methamphetamine, S,S(+)-pseudoephedrine, 1S,2R(+)-ephedrine

carry any meaningful or probative value, are not within our stated data quality objectives. However, the results are reproduced here for academic purposes.

Sample ID	Sample Location	Sample Result µg/100cm ²
LBMS042915-01A	Living room heater	467
LBMS042915-01B	Kitchen ceiling fan	
LBMS042915-01C	South east bedroom top of TV antenna	
LBMS042915-01D	Central bathroom exhaust fan	
LBMS042915-01E	Main bathroom top of ceiling beam	

Table 1
Results of Methamphetamine Samples

CONCLUSIONS

Based on our objective sample results collected during our assessment, the subject property contains methamphetamine contamination in excess of our reporting thresholds. The primary regulatory reference concentration used in Colorado is 0.5 µg/100cm². Therefore, these sample results indicate that methamphetamine contamination exists at the property at concentrations as elevated as about 1,000 times over the regulatory cleanup level.

Pursuant to State statutes, the illegal drug lab has been “otherwise discovered.”

Sincerely,

Caoimhín P. Connell
Forensic Industrial Hygienist

Dear Customer,

Reservoirs Environmental, Inc. is an analytical laboratory accredited for the analysis of Environmental matrices by the National Environmental Laboratory Accreditation Program, Lab Certification #E871030. The laboratory is currently proficient in the in-house ERA PAT Program.

Reservoirs has analyzed the following sample(s) using Gas Chromatography Mass Spectrometry (GC/MS) / Gas Chromatography Flame Ionization Detector (GC/FID) per your request. The analysis has been completed in general accordance with the appropriate methodology as stated in the analysis table. Results have been sent to your office.

RES 318874-1 is the job number assigned to this study. This report is considered highly confidential and the sole property of the customer. Reservoirs Environmental, Inc. will not discuss any part of this study with personnel other than those authorized by the client. The results described in this report only apply to the samples analyzed. This report shall not be reproduced except in full, without written approval from Reservoirs Environmental, Inc. Samples will be disposed of after sixty days unless longer storage is requested. If you should have any questions about this report, please feel free to call me at 303-964-1986.

Sincerely,

A handwritten signature in blue ink, appearing to read "Jeanne Spencer", is written over a light blue horizontal line.

APPENDIX B CONSULTANT'S SOQ

Forensic Applications Consulting Technologies, Inc. Consultant Statement of Qualifications

FACTs project name:	Barbre	Form # ML15
May 4, 2015		

Caoimhín P. Connell, has been involved in clandestine drug lab investigations since 2002 and meets the Colorado Revised Statute §24-30-1402 definition of an "Industrial Hygienist" and is authorized under 6 CCR 1014-3 to perform assessments in illegal drug laboratories. He has been a practicing Industrial Hygienist since 1987. Mr. Connell is a recognized authority in drug-lab operations and is a Certified Instructor in Meth-Lab Safety through the Colorado Regional Community Policing Institute, CRCPI (Colorado Division of Criminal Justice) and was the lead instructor for the CRCPI providing over 260 hours of methlab training for over 45 Colorado Law Enforcement Agencies, federal agents, probation and parole officers throughout Colorado judicial districts. He has provided meth-lab lectures to the US Air Force, the National Safety Council, and the American Industrial Hygiene Association (of which he is a member and serves on the Clandestine Drug Lab Work Group and for whom he conducted the May, 2010, Clandestine Drug Lab Course, and is a coauthor of the AIHA methlab assessment publication.)

Mr. Connell is a member of the American Conference of Governmental Industrial Hygienists, the Occupational Hygiene Society of Ireland, the Colorado Drug Investigators Association, an appointed Member of the National Fire Protection Association, and the ASTM International Forensic Sciences Committee, (where he was the sole sponsor of the draft ASTM E50 *Standard for the Assessment of Suspected Clandestine Drug Laboratories*).

From 2009, Mr. Connell served as the Industrial Hygiene Subject Matter Expert on the Federally funded Interagency Board (Health, Medical, and Responder Safety SubGroup), and was elected full member of the IAB-HMRS in 2011 where he now serves. He is the only private consulting Industrial Hygienist in Colorado certified by the Office of National Drug Control Policy High Intensity Drug Trafficking Area Clandestine Drug Lab Safety Program, and P.O.S.T. certified by the Colorado Department of Law.

He has received over 194 hours of highly specialized law-enforcement sensitive training in drug lab operation, and under supervision of the US DEA, he has manufactured methamphetamine using a variety of street methods. He has received highly specialized drug lab assessment training through the Iowa National Guard, Midwest Counterdrug Training Center and the Florida National Guard Multijurisdictional Counterdrug Task Force, St. Petersburg College, Rocky Mountain HIDTA, as well as through the US NHTSA, and the U.S. Bureau of Justice Assistance (US Dept. of Justice) and he is currently ARIDE Certified.

Mr. Connell is a current sworn law enforcement officer who has conducted clandestine laboratory investigations and performed risk, contamination, hazard and exposure assessments from both the law enforcement (criminal) perspective, and from the civil perspective in residences, apartments, motor vehicles, and condominiums. Mr. Connell has conducted over 583 assessments of illegal drug labs in CO, SD, NE, OK, and collected over 5,249 samples during assessments (a partial detailed list of drug lab experience is available on the web at): <http://forensic-applications.com/meth/DrugLabExperience2.pdf>

He has extensive experience performing assessments pursuant to the Colorado meth-lab regulation, 6 CCR 1014-3, and was an original team member on two of the legislative working-groups which wrote the original regulations for the State of Colorado and he was the primary contributing author of Appendix A (*Sampling Methods And Procedures*) and Attachment to Appendix A (*Sampling Methods and Procedures Sampling Theory*) of the original Colorado regulations. Mr. Connell strongly objected to the unscientific, unfounded and inappropriate amendments now applicable to those original regulations.

Recommended by the US NIOSH as Peer Review Expert for the NIOSH 9109 Method, *Methamphetamine*, he has been admitted as a drug lab expert in Colorado, and an Industrial Hygiene Expert in Colorado in both civil and criminal courts as well as Federal Court in Pennsylvania. He has provided expert testimony in several criminal cases including Grand Jury testimony and testimony for US Bureau ATF and he testified before the Colorado Board of Health and Colorado Legislature Judicial Committee regarding methlab issues. Mr. Connell has provided services to private consumers, Indian Nations, State Investigators, and Federal Investigators.
