EXECUTIVE SUMMARY

Forensic Applications Consulting Technologies, Inc. (FACTs) is a private S-Corporation in the State of Colorado offering classical Industrial Hygiene services to its clients.

FACTs is performing a series of regulatory audits on public domain documents. This document has been prepared by Forensic Applications Consulting Technologies, Inc. in response to actions by the Colorado Department of Public Health and Environment (CDPHE), and pursuant to the provisions of C.R.S. 18-8-115 *Duty to report a crime - liability for disclosure*. This review pertains to the document identified as:

Methamphetamine Contamination Real Estate Screening Assessment
2071 London Carriage Grove
Colorado Springs, Colorado 80920
Submitted by:
HEALTH AND ENVIRONMENTAL TECHNOLOGY (sic)
February 5, 2015

The misspelling of the company name, "HEALTH AND ENVIRONMENTAL TECHNOLOGY" is taken directly, and verbatim, from the report for an unknown property, but listed as 2071 London Carriage Grove, Colorado Springs, Colorado (the subject property).

There is no listed property in Colorado with the address of

2071 London Carriage Grove
Colorado Springs, Colorado 80920

Although Mr. Rodosevich identifies this property eleven separate times in his report, and does not identify any other property, according to public records, there is no such location in the State of Colorado.

In past audited reports, Mr. Rodosevich frequently identifies regulations that don't exist, addresses that don't exist and samples he has never collected. Mr. Rodosevich habitually inserts long discussions on work he has obviously never performed, and uses language he has stolen from other sources and which doesn't apply to the property he is discussing. In some cases, his reports have contained three addresses, complete with maps but for none of the correct properties, and all jumbled together into the same report. Historically, Mr. Rodosevich has plagiarized reports prepared by FACTs, Inc. inserting FACTs language that didn't apply to his property. We have been informed that Mr. Rodosevich has told several of his clients that he has successfully sued Forensic Applications Consulting Technologies, Inc.; however that also is not true, and neither Mr. Rodosevich nor his firm has never filed an action against FACTs.

In some of Mr. Rodosevich's reports, he frequently misspells the name of his own company, and cannot correctly spell "methamphetamine;" sometimes he does both simultaneously.¹ For this property, Mr. Rodosevich has inserted a map seemingly identifying the nonexistent location. Apparently Mr. Rodosevich never looked at the map to determine if he was actually at the location identified on the map.

HET Map of Situs

¹ METHAMPHATAMINE (*sic*) LABORATORY REPORT, 7071 Sapling Place, Colorado Springs, Colorado 80922, Robert M. Rodosevich, Health And Environmental Techology (*sic*), September 11, 2013 (this report contained approximately 377 regulatory violations)

If we look at the El Paso County Assessor's records, we see this location is similar to a possible situs (shaded):

El Paso County Assessor Public Record of 2072 London Carriage Grove

If we go to that location, as seen from an aerial view, we see that 2072 London Carriage Grove would be consistent with the property identified in Mr. Rodosevich's aerial view.

Google Earth²

² Copyright Digital Globe 2016 – used here in good faith under the fair use doctrine.

However, in other reports by Mr. Rodosevich, we have seen Mr. Rodosevich insert maps for properties that are not even close to the subject property he claimed to be assessing. Therefore, it is not possible to know with confidence where Mr. Rodosevich supposedly performed his “methamphetamine” (sic) work. The address of 2072 London Carriage Road would not be consistent with several of his other comments in his current report as discussed below.

However, since Mr. Rodosevich habitually places language in his reports that have nothing to do with actual site conditions, it is simply not possible to know with confidence where Mr. Rodosevich was, or what Mr. Rodosevich did when he got there.

Therefore, based on the available documentation and the history of gross incompetence and fabrications on the part of Mr. Rodosevich, it is difficult to reconcile the differences found in this particular report by Mr. Rodosevich. In the absence of contrary information, FACTs will use the property address of:

**2072 London Carriage Grove
Colorado Springs, Colorado 80920**

The purpose of this review is to document regulatory violations associated with the assessment of methamphetamine affected properties (6 CCR 1014-3). The level of scrutiny and detail employed in this review is that which has been established by the Colorado Department of Public Health and Environment (CDPHE).

The CDPHE has known of the violations identified in this report since at least March of 2015, and in violation of 6 CCR 1014-3 part 3: Enforcement And Administrative Penalties, the CDPHE has failed to enforce the regulations:

3.0 Notification and Imposition

3.1 Whenever the Department has reason to believe that a person has violated any requirement of these regulations, the Department shall notify the person, specifying the requirement alleged to have been violated and the facts alleged to constitute the violation.

HISTORY

Historically, Ms. Brisnehan, the regulator with the CDPHE who is responsible for overseeing the compliance of submitted reports regarding the assessment of methamphetamine affected properties, has been providing misleading information to the City of Colorado Springs,³ and has an history of protecting Mr. Rodosevich and helping

³ See for example the email regarding Citizen Request #4967, Tuesday, September 4, 2012 4:00 PM, Sgt. Harrell, Vice and Narcotics, Colorado Springs Police Department, 705 S Nevada Avenue, Colorado Springs, CO 80903, regarding 2045 Farnsworth, Colorado Springs, CO 80916

Mr. Rodosevich cover-up contaminated properties and cover up his regulatory violations⁴ and gross incompetence⁵ and deceptive trade practices.⁶

With the assistance of Ms. Brisnehan, Robert M. Rodosevich has developed a long history of regulatory violations, falsified documents relating to real estate and invalid assessments of illegal drug laboratories in El Paso County.^{7,8,9,10,11,12}

FACTs obtained a copy of the current public domain report under review through the Colorado Open Records Act (CORA) directly from the Colorado Department of Public Health and Environment (CDPHE).

REVIEW OF THE SCREENING LEVEL ASSESSMENT

During the performance of a Screening Level Assessment (for methamphetamine) of a property, the Consultant is required by regulations (6 CCR 1014-3) to perform specific mandatory tasks and provide specific mandatory documentation.

⁴ See for example Ms. Colleen Brisnehan's communications to the Colorado Springs Police Department concerning: METHAMPHATAMINE (sic) LABORATORY REPORT, 2045 Farnsworth, Colorado Springs, CO 80916, Submitted to Mr. John Hermes, ReMax Company, Colorado Springs, Colorado. Prepared by Health and Environmental Technology, LLC, (Robert M. Rodosevich), May 29, 2012

⁵ See for example: METHAMPHATAMINE (sic) LABORATORY REPORT, 1299 C Vondelpark, Unit C, Colorado Springs, Colorado Prepared by Health and Environmental Technology, LLC, (Robert M. Rodosevich), December 4, 2013

⁶ See for example: February 23, 2012, Pre-Purchase Assessment "METHAMPHATAMINE" (sic) LABORATORY REPORT, for 539 Shady Crest, Colorado Springs, Colorado. Prepared for: Rocky Mountain Community Land Trust, 1212 W. Colorado Ave., Colorado Springs, CO 80904

¹⁰ See for example: 120 violations associated with 1349 Hazeline Lake Drive Colorado Springs, Colorado 80915 http://www.forensic-applications.com/meth/HET_Hazeline_Screen_RA.pdf

¹¹ See for example, 69 violations associated with 1006 Gilfin Circle, Colorado Springs, Colorado 80915, http://www.forensic-applications.com/meth/HET_Gilfin_Screen_RA.pdf

¹² See for example, 92 regulatory violations at: 2044 Summerset Drive, Colorado Springs, Colorado 80902 http://www.forensic-applications.com/meth/HET_Summerset_Screen_RA.pdf

In reviewing the Screening Assessment report by Mr. Rodosevich for this subject property, the following regulatory violations have been identified:

Violation of Part 2 §3.0

According to the regulations:

3.0 Interim Authorization

3.1 Persons who, as of the effective date of this Part 2 of these regulations, are performing assessment or decontamination activities subject to these regulations may continue to perform such activities, as long as they comply with the requirements of this section 3.

Historically, jurisdictions have been receiving misinformation regarding the State regulations from Ms. Colleen Brisnehan with CDPHE.

Ms. Brisnehan, has historically been identified as serving on the Board of Directors for a private organization called the “Colorado Association of Meth and Mold Professionals (CAMMP)”, a largely discredited group of untrained consultants claiming expertise in mould related issues and methamphetamine. Although Ms. Brisnehan’s dual role appears to be a violation of Colorado Revised Statutes §24-50-117, she continued to provide regulatory protection for members of her private club who were performing fraudulent assessments of illegal drug laboratories.^{13,14}

As a result, serious problems were created as scofflaws performed unlawful assessments with impunity and falsely claimed the assessments were in accordance with State regulations and State Statutes.

Due to the serious problems thus created by such fraudulent consultants, Senator Lois Tochtrop promulgated Senate Bill SB13-219 which was signed by Gov. Hickenlooper at the end of May 2013. That bill provided provisions that required the State of Colorado to develop standards for performing screening evaluations for properties involved in Real Estate transactions and for the licensing of authorized Industrial Hygienists involved in this work, including disciplinary actions against those who violated the regulations.

However, before the passage of SB13-219, unscrupulous consultants knew there was little chance of any retribution for violating State regulations and they could continue to cheat consumers with impunity. Therefore, SB13-219 heavily modified Colorado Revised Statutes and placed in those statutes provisions for disciplinary fines for consultants who violate the State regulations.

Colorado Revised Statutes: 25-18.5-107. *Enforcement*

¹³ See for example: 4893 S Johnson Street, Denver http://www.forensic-applications.com/meth/Johnson_Critical_review.pdf

¹⁴ See for example: 4690 West 76th Ave., Westminster <http://forensic-applications.com/meth/DimickCriticalReview.pdf>

(1) A person that violates any rule promulgated by the board under section 25-18.5-102 is subject to an administrative penalty not to exceed fifteen thousand dollars per day per violation until the violation is corrected.

The new regulations were Adopted by the Colorado Board of Health on October 15, 2014, and the new regulations became effective on December 15, 2014. Astonishingly, the task of certifying consultants and enforcing the new regulations was given to the very person who had created the need for the new statues and regulations – Ms. Brisnehan with the CDPHE.

Ms. Brisnehan immediately ignored the new provisions of the regulations and granted State Authorization to members of her commercial group including those who did not meet the mandatory criteria. Additionally, instead of enforcing the regulations, Ms. Brisnehan continued to protect those consultants performing invalid assessments, and even went so far as to fabricate information in her own official documents to try and unlawfully benefit members of her group.¹⁵

As a result, the regulations are now being completely ignored by untrained consultants, and the CDPHE is assisting untrained consultants in fraudulent work in Colorado. As of the date of this audit, FACTs has identified no fewer than 13,394 (thirteen *thousand*, three hundred and ninety four) regulatory violations in just the first 40 reports audited.

As identified in the regulatory citation given above, the performance of a Screening Level Assessment can only be performed by certain personnel. There is nothing in the public record to indicate that Mr. Rodosevich had, as of the effective date of Part 2 of the regulations, been performing assessments subject to the regulations and, as documented here, Mr. Rodosevich continues to ignore the regulations and perform invalid assessments.

In his report, Mr. Rodosevich uses the title “Certified Clandestine Laboratory Specialist” which is the same title he has used for many years. There is no such title in the State of Colorado, and there is nothing in the public domain documentation that would suggest that Mr. Rodosevich has ever received any kind of training in illegal drug laboratories -- their recognition or assessment

Violation of Section 3.0

According to mandatory regulations, during a Screening Level Assessment, the consultant is required to perform specific activities:

3.0 Screening Level Assessment of Properties not known to be methamphetamine-affected properties. This section establishes procedures and standards for testing residential real property pursuant to § 38-35.7-103, C.R.S. Screening level assessments pursuant to this section are for the purpose of determining if the subject property is a methamphetamine-affected property. The procedures in this section are not to be used to make clearance decisions.

¹⁵ See Letter of Variance, from Colleen Brisnehan April 13, 2015 to Mr. Andre Gonzales (regarding samples collected on behalf of a fellow CAMMP Board Member) at 4383 Tennyson Street, Denver, Colorado, 80212.

3.5 The Consultant shall conduct limited composite wipe sampling of the structure(s) for methamphetamine (including fixtures, as appropriate), in accordance with Section 6 of this Part 1.

In his report, Mr. Rodosevich establishes that he was aware that he was conducting a screening assessment as part of a real estate transaction:

This was a pre-purchase assessment intended to show the likely presence or absence of methamphetamine contamination at this residence.

Furthermore, Mr. Rodosevich states his work was performed pursuant to:

According to the State of Colorado Regulations 6 CCR 1014-3 and §38-35.7-103

Therefore, we can state that he established that he was aware of those provisions, and knowingly and willfully violated those provisions.

Violation of §3.7 (4 Violations)

According to mandatory regulations, during a Screening Level Assessment, the consultant is required to provide specific information including:

3.7 Information collected during the screening level assessment shall be documented in a Screening Level Assessment Report and shall include, but not be limited to, the following, to the extent available and applicable:

3.7.1 Subject property description including physical address, number and type of structures present.

As already described, there is no property located at 2071 London Carriage Grove, Colorado Springs, CO.

Mr. Rodosevich typically inserts boiler plate language into his reports regardless of actual site conditions and it is often difficult to know if the language in the report actually pertains to the property he is addressing. For example, for this property, Mr. Rodosevich describes the 3,492 square foot property as:

The property is a single family townhome of approximately 3068 square feet.

He then describes the 2002 residence (which has been sold on numerous occasions, and occupied by several different families)

The residence was unoccupied at the time of inspection and was a new construction. The residence had never been occupied.

Aerial photography of the housing area given by Mr. Rodosevich in his report indicates that all the structures in the area identified by Mr. Rodosevich in his aerial photograph were all present since at least 2003, and El Paso County Assessor's records confirm that

each of the properties in the area indicated by Mr. Rodosevich were all occupied, and many had several owners:

Aerial Photograph of Area, October 2003¹⁶

Therefore for this property:

Mr. Rodosevich failed to provide the physical address of the property as required

Mr. Rodosevich failed to provide a property description

Mr. Rodosevich failed to provide a description of number structures

Mr. Rodosevich failed to provide a description of type of structures

Violation of §3.7.2 (4 Violations)

According to mandatory regulations, during a Screening Level Assessment, the consultant is required to provide specific information including:

3.7.2 Description of structural features in all buildings comprising the subject property, such as attics, false ceilings, crawl spaces, and basements including identification of structural features connected to adjacent units or common areas.

Mr. Rodosevich failed to identify or even mention an attic

Mr. Rodosevich failed to identify or even mention a crawlspace

Mr. Rodosevich failed to identify or even mention any common structures

Mr. Rodosevich failed to identify or even mention the presence of common ventilation

To the extent that Mr. Rodosevich entirely failed to describe the attic associated with this property, there is no way to know if the attic was common to other residences in the Townhouse superstructure .

¹⁶ Copyright, 2016 by Digital Globe, used here in good faith by FACTs, Inc. under the Fair Use Doctrine.

Violation of §3.7.3 (2 Violations)

According to mandatory regulations, during a Screening Level Assessment, the consultant is required to provide specific information including:

3.7.3 Identification and documentation of common ventilation systems connected to other units or common areas.

Mr. Rodosevich entirely failed to describe any kind of ventilation system at the structure. Mr. Rodosevich entirely failed to describe if the ventilation system at the structure was a shared system.

Violation of §3.7.5 (2 Violations)

According to mandatory regulations, during a Screening Level Assessment, the consultant is required to provide specific information including:

3.7.5 Photographic documentation of property conditions.

1. Nowhere in the report do we see photographic documentation of the attic
2. Nowhere in the report do we see photographic documentation of the exterior grounds relating to the other structures connected to the subject property.
3. Nowhere in the report do we see photographic documentation of the plumbing.

Since it has already been documented that the aerial photograph provided by Mr. Rodosevich is not for the structure claimed, it is difficult to know if the photographs provided in the report are actually for the site at all.

For example, in his report, the photograph on the following page is identified as:

main level indicating stairwell to lower level of house

And yet, the photograph does not relate in any way to the description.

**HET Photograph
(Purporting to show the stairwell to lower level of house)**

Violation of §3.7.6.1

According to mandatory regulations, during a Screening Level Assessment, the consultant is required to provide specific information including:

3.7.6.1 a description of the sampling procedures used, including sample collection, handling, and quality assurance/quality control (QA/QC);

This information is missing from the report. For example, nowhere in the report does Mr. Rodosevich explain why he didn't bother to collect a QA/QC field blank as required. Mr. Rodosevich failed to explain why his sampling handling was contrary to regulations.

Violation of §3.7.6.3 (3 Violations)

According to mandatory regulations, during a Screening Level Assessment, the consultant is required to perform specific activities including:

3.7.6 Documentation of screening level sampling shall include:

3.7.6.3 results of sampling, including a description of sample locations and a computer generated figure illustrating the layout of the building(s) and sample locations and identification.

In his report, Mr. Rodosevich failed to provide a computer generated sketch as required. The State specifically requires a computer generated figure illustrating the layout of the building(s) and sample locations and identification to avoid the poor quality of hand drawn figures.

The hand drawn plan provided in the report failed to document the layout of the buildings. The hand drawn plan provided in the report failed to document the location of the garage sample.

Violation of §6.1.3

During a Screening Assessment, the consultant is required to perform specific tasks including:

6.1.3 The following sample collection procedures shall be followed for screening level sampling, preliminary assessment sampling and clearance sampling, except as provided in Section 6.8.2 of this Part 1.

As described below, Mr. Rodosevich failed to comply with this requirement to the extent that none of the samples collected during the screening assessment were valid.

Violation of §6.1.3.3

During a Screening Assessment, the consultant is required to perform specific tasks including:

6.1.3.3 Wipe sampling shall be used to determine the extent of iodine contamination whenever there is visible evidence of iodine staining on surfaces that will not be removed.

As already discussed, there is no indication that Mr. Rodosevich has ever received any training in the assessment of illegal drug laboratories and there is nothing to indicate that Mr. Rodosevich would possess the necessary skill set needed to fulfill this mandatory obligation. Nowhere in the report has Mr. Rodosevich even addressed iodine or even used the word “iodine.”

Violation of §6.2.1 (13 Violations)

During a Screening Assessment, the consultant is required to perform specific tasks using specified sampling materials including:

6.2 Discrete Wipe Sample Collection Procedures. The following procedure **shall** be used for collecting discrete wipe samples:

6.2.1 Sample media shall consist of 2x2 inch wipes ...

In his report, Mr. Rodosevich identifies his sampling materials thusly:

The wipe sample media is individually wrapped Johnson and Johnson TM gauze pads.

Johnson & Johnson does not manufacture an individually wrapped 2 in X 2 in gauze pad that is actually 2 in X 2 in.

The photograph below documents the size of the individually wrapped Johnson & Johnson 2" X 2" pad – the first photograph is directly from the manufacturer:

Photograph of J&J 2 in X 2 in Pad

The next photograph is the product purchased directly from a major retail outlet:

Photograph of J&J 2 in X 2 in Pad

As can be seen, (and as would be immediately obvious to anyone with even mediocre awareness), the Johnson & Johnson product is not two inches by two inches. Mr. Rodosevich claims to have used 13 of these, therefore, there are 13 violations.

Violation of §6.2.1.1 through §6.2.1.3 (13 Violations)

During a Screening Assessment, the consultant is required to perform specific tasks using specified sampling materials including:

6.2.1 Sample media shall consist of 2x2 inch wipes made of one of the following:

- 6.2.1.1 Cotton gauze material.
- 6.2.1.2 4-ply non-woven cotton/polyester blend.
- 6.2.1.3 Tightly knitted continuous filament polyester.

The product is not a cotton, or cotton blend, and polyester is only a minor material component in the product.

Since Mr. Rodosevich reported he collected 13 aliquots with the disallowed materials, there are 13 violations.

Violation of §6.2.2 (8 Violations)

During a Screening Assessment, the consultant is required to perform specific tasks including:

6.2.2 Delineate a 100 cm² area on the surface to be sampled, either by attaching a physical template to the surface (being careful not to touch the area within the template), or by an equivalently reliable and accurate method. The area within the template (i.e., the sample area) shall be 100 cm².

As documented in other reports, (see for example, the photograph below), Mr. Rodosevich documents that he frequently fails to collect 100 cm² for his samples. Instead, it would appear that Mr. Rodosevich would attach a 100cm² template and assume the surface inside the template would magically fill in the air spaces in the template:

HET Photograph¹⁷

¹⁷ 2044 Summerset Drive, Colorado Springs, Colorado 80902

It is difficult to know how many samples were collected using this poor (and unlawful) sampling protocol. For this property, there is virtually no information on the sampling locations and in violation of §6.2.11, there are photographs for only four of the samples. Therefore, since Mr. Rodosevich has already demonstrated that he regularly makes the false claim to have collected 100 cm² for each aliquot when in fact he does not collect 100 cm², and documentation is missing for eight of his samples, it is safe to assume that Mr. Rodosevich cannot document that he collected 100 cm² for at least eight of his samples.

Violation of §6.2.4 (13 Violations)

During a Screening Assessment, the consultant is required to perform specific tasks using specified sampling materials including:

6.2 Discrete Wipe Sample Collection Procedures. The following procedure **shall** be used for collecting discrete wipe samples:

6.2.4 Wet the sample media with isopropanol to enhance collection efficiency.

In his report, Mr. Rodosevich identifies his sampling materials thusly:

Each gauze pad is moistened with reagent grade methyl alcohol.

Since Mr. Rodosevich identifies 13 such aliquots, there were 13 violations of this provision.

Violation of §6.2.7-10 (8 Violations)

During a Screening Assessment, the consultant is required to perform specific tasks including:

6.2.7 Wipe the surface using one of the following methods:

6.2.7.1 Square method: Start at the outside edge and progress toward the center of the surface area by wiping in concentric squares of decreasing size.

6.2.7.2 "S" method: Wipe horizontally from side-to-side in an overlapping "S"-like pattern as necessary to completely cover the entire wipe area.

6.2.8 Without allowing the sample media to come into contact with any other surface, fold the sample media with the sampled side in.

6.2.9 Use the same sample media to repeat the sampling of the same area using the same method. If using the "S" method, the second pass shall be sampled by wiping with overlapping "S"-like motions in a top-to-bottom direction.

6.2.10 Fold sampled side in. Using the same sample media, sample the same area a third time. The third pass shall be sampled by wiping using the method not previously used (i.e., use the square method if the "S" method was originally used).

In his report, Mr. Rodosevich states:

- *The sample area is wiped from side to side using an s-like pattern (east to west) to completely cover the sample area.*
- *The sample media is folded with the sampled side facing in, then the sample area is wiped again using the same s-like motion in the opposite direction of the first sample (north to south).*
- *The sample media is folded in half again with the sample side facing in, then the sample area is wiped again using a square shaped pattern and gradually decreasing the size of the square until the entire sample areas has been covered for a third time.*

However as documented elsewhere,^{18,19,20} Mr. Rodosevich makes this claim even for aliquots where it would have been a physical impossibility to follow the above method, while using a template and collect 100 cm² as required. One such example, is in the photograph already presented above.

Since we can demonstrate that his sampling description was merely boiler plate and not an actual description of his samples anyway, and, in violation of §6.2.11, photographs are missing for eight samples, we can presume that Mr. Rodosevich cannot document that he collected the samples as claimed for at least eight aliquots.

Violation of §6.2.11 (9 Violations)

During a Screening Assessment, the consultant is required to perform specific tasks including:

6.2.11 Photograph each sample location.

Although Mr. Rodosevich claims to have collected 13 aliquots, there were only four photographs of sample locations.

¹⁸ See for example: 120 violations associated with 1349 Hazeline Lake Drive Colorado Springs, Colorado 80915 http://www.forensic-applications.com/meth/HET_Hazeline_Screen_RA.pdf

¹⁹ See for example, 69 violations associated with 1006 Gilfin Circle, Colorado Springs, Colorado 80915, http://www.forensic-applications.com/meth/HET_Gilfin_Screen_RA.pdf

²⁰ See for example, 92 regulatory violations at: 2044 Summerset Drive, Colorado Springs, Colorado 80902 http://www.forensic-applications.com/meth/HET_Summerset_Screen_RA.pdf

Violation of §6.2.12

During a Screening Assessment, the consultant is required to perform specific tasks including:

6.2.12 Submit at least one field blank, prepared and handled in the same fashion but without wiping, for every 10 samples collected, according to the following:

Mr. Rodosevich failed to submit any field blanks as required.

Violation of §6.2.12.3

During a Screening Assessment, the consultant is required to perform specific tasks including:

6.2.12.3 For projects with fewer than 10 samples collected, the last sample collected shall be the field blank.

Mr. Rodosevich ignored this requirement and failed to collect any field blanks – the last sample in the analysis sequence was documented as:

Client ID Number	Lab ID Number	Sample Area (cm ²)	Reporting METHAMPHETAMINE Limit (µg)	Reporting METHAMPHETAMINE CONCENTRATION (µg)	Reporting METHAMPHETAMINE Limit (µg/100cm ²)	Reporting METHAMPHETAMINE CONCENTRATION (µg/100cm ²)
1-4-2071	EM 1342484	400	0.05	BRL	0.01	BRL
5-8-2071	EM 1342485	400	0.05	BRL	0.01	BRL
9-12-2071	EM 1342486	400	0.05	BRL	0.01	BRL
Garage	EM 1342487	100	0.05	BRL	0.05	BRL

Violation of §6.2.12.5

During a Screening Assessment, the consultant is required to perform specific tasks including:

6.2.12.5 Field blanks shall be representative of the majority of samples collected for every sample group (i.e., discrete or composite).

For this project, Mr. Rodosevich failed to provide a field blank that represented the majority of samples.

Violation of §6.2.14

During a Screening Assessment, the consultant is required to perform specific tasks including providing specific documents with specific information:

6.2.14 Maintain a Chain-of-Custody Record covering the time of sample collection through final disposition. Document sample(s) collected from a single methamphetamine-affected property on one Chain-of-Custody Record. Every transfer of custody shall be noted and signed for and a copy of the record shall be kept by each individual who has signed it. Samples shall be sealed, labeled, and secured. All samples collected shall be transported directly to the laboratory. Shipping samples overnight is considered direct transport, and

the shipping label shall be considered part of the Chain-of-Custody Record. Retain all sample documents for the project record and include them in the project reports. At a minimum, the Chain-of-Custody Record shall include the following:

Violation of §6.2.14.2

During a Screening Assessment, the consultant is required to provide specific information:

6.2.14.2 subject property address;

Mr. Rodosevich failed to provide the subject property address on the chain-of-custody; instead, Mr. Rodosevich provided the partial nonexistent address of “2071 London Carriage”

Violation of §6.2.14.3

During a Screening Assessment, the consultant is required to provide specific information:

6.2.14.3 sampler name and contact information;

Mr. Rodosevich failed to provide the identity of the sampler on the chain-of-custody.

Violation of §6.2.14.5 (4 Violations)

During a Screening Assessment, the consultant is required to provide specific information:

6.2.14.5 sample area;

There is no information for at least eight aliquots. As already documented elsewhere,^{21,22,23} Mr. Rodosevich regularly claims to provide the laboratory with the sample area, when very often the sample area he provides is objectively, and demonstrable false. Since, in violations of the regulations, Mr. Rodosevich failed to document his samples, Mr. Rodosevich cannot document that eight of his samples were 100 cm² which impacts each of the four sample sets on his chain-of-custody.

Violation of §6.2.14.6 (4 Violations)

During a Screening Assessment, the consultant is required to provide specific information:

6.2.14.6 number of sample aliquots;

²¹ See for example: 120 violations associated with 1349 Hazeline Lake Drive Colorado Springs, Colorado 80915 http://www.forensic-applications.com/meth/HET_Hazeline_Screen_RA.pdf

²² See for example, 69 violations associated with 1006 Gilfin Circle, Colorado Springs, Colorado 80915, http://www.forensic-applications.com/meth/HET_Gilfin_Screen_RA.pdf

²³ See for example, 92 regulatory violations at: 2044 Summerset Drive, Colorado Springs, Colorado 80902 http://www.forensic-applications.com/meth/HET_Summerset_Screen_RA.pdf

Mr. Rodosevich failed to provide this information on the chain-of-custody for four samples.

Violation of §6.2.14.7 (4 Violations)

During a Screening Assessment, the consultant is required to provide specific information:

6.2.14.7 number of containers for each sample;

Mr. Rodosevich failed to provide this information on the chain-of-custody for four samples.

Violation of §6.2.14.8 (3 Violations)

During a Screening Assessment, the consultant is required to provide specific information:

6.2.14.8 sample collection time and date;

On the submitted chain-of-custody, Mr. Rodosevich failed to provide the time of sample collection as required. According to the chain-of-custody, all the samples were collected at “10 am.” It would be physically impossible to collect 13 aliquots each with three passes in different parts of the house in sixty seconds. Therefore, we believe that one of the samples may have been collected at “10 am” leaving the sample collection time for three submissions with no sample collection time.

Violation of §6.2.14.9 (4 Violations)

During a Screening Assessment, the consultant is required to provide specific information including:

6.2.14.9 sample matrix

The required information is missing from the documentation for four samples.

Violation of §6.2.14.11

During a Screening Assessment, the consultant is required to provide specific information including:

6.2.14.11 sample preservatives

This information is missing from Mr. Rodosevich’s chain of custody.

Violation of §6.2.15

During a Screening Assessment, the consultant is required to provide specific information including:

6.2.15 Painted-over surfaces. Estimate the concentration of methamphetamine present below a painted-over surface (as defined in Section 2 of this Part 1) by one of the following methods:

Nowhere in his report has Mr. Rodosevich even addressed this issue and, in no manner at all, even mentions the issue in his report.

Violation of §6.3.6 (8 Violations)

During a Screening Assessment, the consultant is required to perform specific tasks including:

6.3.6 Collect all individual aliquots from 100 cm² sampling areas.

As already described, information is missing for eight samples, and Mr. Rodosevich has a long established history of failing to collect 100 cm², and knowingly providing false information on the sampling forms and in his reports. Therefore, Mr. Rodosevich cannot document that he collected 100 cm² for eight of his samples.

Violation of §6.7.1.1 (3 Violations)

According to mandatory State regulations during real estate screening, the consultant shall collect:

6.7.1.1 a minimum of two (2) 4-aliquot composite samples must be collected, with at least one aliquot being collected from each room.

For this property, Mr. Rodosevich failed to collect a minimum of two (2) 4-aliquot composite samples as required.

Mr. Rodosevich failed to collect a sample from two of the bathrooms (one of the bathrooms is apparently missing from his drawings).

Also according to §6.7.1.1:

6.7.1.1 ...At least one composite sample must include an aliquot from the cold air return of a heating system, if it is a forced air system.

Mr. Rodosevich failed to collect a sample from the cold air return as required.

Violation of §6.7.1.2 (6 violations)

According to mandatory State regulations during the screening evaluation, the consultant shall collect a sample from:

6.7.1.2 All exhaust fans (including, but not limited to, kitchen, bathrooms, attic vent fans, or whole house exhaust fans) must also be sampled. Exhaust fan samples shall be collected from inside the fan compartment, the fan blade, or the back side of the fan grill. A separate surface sample does not need to be collected from any room from which a fan or ventilation system sample is collected.

1. Failure to collect a sample from the inside of exhaust fan in Bathroom #1.
2. Failure to collect a sample from the inside of exhaust fan in Bathroom #2.
3. Failure to collect a sample from the inside of exhaust fan in Bathroom #3.

4. Failure to collect a sample from the inside of exhaust fan in Bathroom #4.
5. Failure to collect a sample from the kitchen exhaust.
6. Failure to collect a sample from the attic fan.

Colorado Criminal Code – Fraud; Offering a false instrument for recording

One of two mental states necessarily must have been present in the performance of the work at the subject property: Either 1) Mr. Rodosevich knew that the work he was performing was grossly incompetent and not in compliance with State Regulations (as demonstrated above) or, 2) Mr. Rodosevich was unaware of the fact that his work was deviating from mandatory State requirements and he was willfully and intentionally violating State regulations.

However, Mr. Rodosevich has specifically referenced 6 CCR 1014-3 (even though he erroneously believed it to be a State statute) and he is explicitly recognized by Ms. Brisnehan with CDPHE as being proficient in such assessments. Therefore, he claims to have knowledge of such issues. Since, to date, FACTs has documented hundreds of regulatory violations associated with Mr. Rodosevich's work, one must conclude that Mr. Rodosevich knowingly, willingly and intentionally performed work that grossly deviated from mandatory State requirements.

According to Colorado Revised Statute §18-5-114 (*Offering a false instrument for recording*), a person commits a class 5 felony when offering a false instrument for recording in the first degree if, knowing that a written instrument relating to or affecting real or personal property or directly affecting contractual relationships contains a material false statement or material false information, and with intent to defraud, he presents or offers it to a public office or a public employee, with the knowledge or belief that it will be registered, filed, or recorded or become a part of the records of that public office or public employee.

Pursuant to State statute, and state regulations, the “Screening Level Assessment” must be filed with the State of Colorado (indeed the report we reviewed was obtained from the State of Colorado through the Colorado Open Records Act). Therefore, we believe the facts objectively establish that Mr. Rodosevich was aware of such recording and was aware of the false statements made therein when, with the intent to defraud, Mr. Rodosevich explicitly told his client that he was performing work pursuant to State regulations, when in fact, Mr. Rodosevich know his work was not compliant.

Colorado Consumer Protection Act

In Colorado, consumers are protected against deceptive trade practices as delineated in the Colorado Consumer Protection Act, CRS Title 6, Article 1. According to those statutes, a person engages in a deceptive trade practice when, in the course of such person's business or occupation, that person knowingly makes a false representation as to the certification of their services, and/or knowingly makes a false representation as to the characteristics of

their services and/or represents their services are of a particular standard, quality, or grade if he knows or should know that they are not as specified.

CONCLUSION

In our review, FACTs has identified no fewer than 128 regulatory violations of 6 CCR 1014-3, in the referenced report with the nonexistent address of 2071 London Carriage Grove, Colorado Springs, Colorado.

Unfortunately, during the revision of the regulations, all scientific validity for the sampling was removed, and no longer applies to the regulations. One of the provision that was removed, was that samples needed to be collected from areas with an high expectation of contamination. For this property, since the samples were collected by an untrained individual, none of the samples were collected from areas that, if contamination was present, the sample would have an high expectation of contamination. That is, all the samples were collected from areas that in a contaminated property, may not demonstrate contamination.

FACTs project name:	General Distribution	Form # ML15
January 19, 2016		

Caoimhín P. Connell, has been involved in clandestine drug lab investigations and assessments since 2002 and meets the Colorado Revised Statute §24-30-1402 definition of an "Industrial Hygienist." He has been a practicing Industrial Hygienist since 1987. Mr. Connell is a recognized authority in drug-lab operations and is a Certified Instructor in Meth-Lab Safety through the Colorado Regional Community Policing Institute, CRCPI (Colorado Division of Criminal Justice) and was the lead instructor for the CRCPI through the Colorado Division of Criminal Justice, providing over 260 hours of methlab training for over 45 Colorado Law Enforcement Agencies, federal agents, probation and parole officers throughout Colorado judicial districts. He has provided meth-lab lectures to the US Interagency Board, US Air Force, the National Safety Council, and the American Industrial Hygiene Association (of which he is a member and served on the Clandestine Drug Lab Work Group and for whom he conducted the May, 2010, Clandestine Drug Lab Course, and is a coauthor of the AIHA methlab assessment publication.)

Mr. Connell is a member of the American Conference of Governmental Industrial Hygienists, the Occupational Hygiene Society of Ireland, the Colorado Drug Investigators Association, an appointed Member of the National Fire Protection Association, and the ASTM International Forensic Sciences Committee, (where he was the sole sponsor of the draft ASTM E50 *Standard for the Assessment of Suspected Clandestine Drug Laboratories*).

From 2009, Mr. Connell served as the Industrial Hygiene Subject Matter Expert on the Federally funded Interagency Board (Health, Medical, and Responder Safety SubGroup), and was elected full member of the IAB-HMRS in 2011 where he now serves. He is the only private consulting Industrial Hygienist in Colorado certified by the Office of National Drug Control Policy High Intensity Drug Trafficking Area Clandestine Drug Lab Safety Program, and P.O.S.T. certified by the Colorado Department of Law.

He has received over 194 hours of highly specialized law-enforcement sensitive training in drug lab operation, and under supervision of the US DEA, he has manufactured methamphetamine using a variety of street methods. He has received highly specialized drug lab assessment training through the Iowa National Guard, Midwest Counterdrug Training Center and the Florida National Guard Multijurisdictional Counterdrug Task Force, St. Petersburg College, Rocky Mountain HIDTA, as well as through the US NHTSA, and the U.S. Bureau of Justice Assistance (US Dept. of Justice) and he is currently ARIDE Certified.

Mr. Connell is a current sworn law enforcement officer who has conducted clandestine laboratory investigations and performed risk, contamination, hazard and exposure assessments from both the law enforcement (criminal) perspective, and from the civil perspective in residences, apartments, motor vehicles, and condominiums. Mr. Connell has conducted over 613 assessments of illegal drug labs in CO, SD, NE, OK, and collected over 5,565 samples during assessments (a partial detailed list of drug lab experience is available on the web at): <http://forensic-applications.com/meth/DrugLabExperience2.pdf>

He has extensive experience performing assessments pursuant to the Colorado meth-lab regulation, 6 CCR 1014-3, and was an original team member on two of the legislative working-groups which wrote the original regulations for the State of Colorado and he was the primary author of Appendix A (*Sampling Methods And Procedures*) and Attachment to Appendix A (*Sampling Methods and Procedures Sampling Theory*) of the original Colorado regulations. Mr. Connell strongly objected to the unscientific, unfounded and inappropriate amendments now found in regulation.

Recommended by the US NIOSH as Peer Review Expert for the NIOSH 9109 Method, *Methamphetamine*, he has been admitted as a drug lab expert in Colorado, and an Industrial Hygiene Expert in Colorado in both civil and criminal courts as well as Federal Court in Pennsylvania. He has provided expert testimony in several criminal cases including Grand Jury testimony and testimony for US Bureau ATF and he testified before the Colorado Board of Health and Colorado Legislature Judicial Committee regarding methlab issues. Mr. Connell has provided services to private consumers, Indian Nations, State Investigators, and Federal Investigators, and provided testimony regarding criminal activities of staff members at the Colorado Department of Public Health Environment.

Consultant Interim Authorization Approval

Dear Caoimhin Connell:

The Hazardous Materials and Waste Management Division of the Colorado Department of Public Health and Environment (the Department) has reviewed the application for Consultant Interim Authorization and has determined the application to be complete and in compliance with 6 CCR 1014-3, Regulations Pertaining to the Cleanup of Methamphetamine-Affected Properties (the Regulations).

The Department approves the application for **Consultant Interim Authorization**. This interim authorization approval shall expire on June 15, 2015.

Assessment and sampling of methamphetamine-affected properties may only be conducted by Consultant Firms that have received interim authorization under Part 2, Section 3.2.4 of the Regulations. Therefore, this interim authorization may only be used to conduct assessment and sampling of methamphetamine-affected properties for a Consultant Firm that has received interim authorization approval from the Department.

Consultant Firm Interim Authorization Approval

Dear Forensic Applications Consulting Technologies Inc:

The Hazardous Materials and Waste Management Division of the Colorado Department of Public Health and Environment (the Department) has reviewed the application for Consultant Firm Interim Authorization and has determined the application to be complete and in compliance with 6 CCR 1014-3, Regulations Pertaining to the Cleanup of Methamphetamine-Affected Properties (the Regulations).

The Department approves the application for **Consultant Firm Interim Authorization**. The firm shall only utilize individuals who have received interim authorization under Part 2, Section 3.2.1 of the Regulations to conduct assessment and sampling of methamphetamine-affected properties. This interim authorization approval shall expire on June 15, 2015.

The Regulations require submittal of electronic copies of reports to the Department. Electronic copies of reports should be submitted via email to cdphe_methlabdocuments@state.co.us. The words "report" or "report submittal" should be included in the email subject line, and the property address should be included in the body of the email.

Alternatively, compact disks with electronic copies of reports may be mailed to:

Colorado Department of Public Health and Environment
Hazardous Material and Waste Management Division
4300 Cherry Creek Drive South
Denver, CO 80246-1530
Attn: Colleen Brisnehan or Richard Mruz

Packages may also be hand delivered to the Department's mail room located in the northwest corner of Building B (700 South Ash Street).
